

Skills, Values and Qualifications

Milica Simić

October 2023

- 1 Most relevant experiences and skills
- 2 Most important values at work
- 3 Qualifications for this position

- Employment: Engaged with ADOBE through ENDAVA

- Employment: Engaged with ADOBE through ENDAVA
- Responsibilities: Developing, testing and maintaining Adobe Experience Manager's infrastructure

- Employment: Engaged with ADOBE through ENDAVA
- Responsibilities: Developing, testing and maintaining Adobe Experience Manager's infrastructure
- Contribution: Enabling customers to run their business reliably by automating processes and managing their cloud resources

- Employment: Engaged with ADOBE through ENDAVA
- Responsibilities: Developing, testing and maintaining Adobe Experience Manager's infrastructure
- Contribution: Enabling customers to run their business reliably by automating processes and managing their cloud resources
- Technologies and skills:

 - Teamwork on large-scale project

- Algorithms for DNA sequencing

- Algorithms for DNA sequencing
 - Wrote course on algorithms for DNA sequencing for Faculty of Mathematics' educational software

- Algorithms for DNA sequencing
 - Wrote course on algorithms for DNA sequencing for Faculty of Mathematics' educational software
- MSc thesis: Clustering data obtained through spatial transcriptomics techniques

- Algorithms for DNA sequencing
 - Wrote course on algorithms for DNA sequencing for Faculty of Mathematics' educational software
- MSc thesis: Clustering data obtained through spatial transcriptomics techniques
 - Investigated correlation between spatial coordinates and gene expressions of the cells while also analyzing their impact on cell type

- Algorithms for DNA sequencing
 - Wrote course on algorithms for DNA sequencing for Faculty of Mathematics' educational software
- MSc thesis: Clustering data obtained through spatial transcriptomics techniques
 - Investigated correlation between spatial coordinates and gene expressions of the cells while also analyzing their impact on cell type
- Technologies and skills:

- Algorithms for DNA sequencing
 - Wrote course on algorithms for DNA sequencing for Faculty of Mathematics' educational software
- MSc thesis: Clustering data obtained through spatial transcriptomics techniques
 - Investigated correlation between spatial coordinates and gene expressions of the cells while also analyzing their impact on cell type
- Technologies and skills:
 - DNA sequencing (second-generation sequencers)

- Algorithms for DNA sequencing
 - Wrote course on algorithms for DNA sequencing for Faculty of Mathematics' educational software

- MSc thesis: Clustering data obtained through spatial transcriptomics techniques
 - Investigated correlation between spatial coordinates and gene expressions of the cells while also analyzing their impact on cell type
- Technologies and skills:
 - DNA sequencing (second-generation sequencers)
 - Algorithms for DNA sequencing
 - Spatial transcriptomics and Stereo-seq technology

- Algorithms for DNA sequencing
 - Wrote course on algorithms for DNA sequencing for Faculty of Mathematics' educational software
- MSc thesis: Clustering data obtained through spatial transcriptomics techniques
 - Investigated correlation between spatial coordinates and gene expressions of the cells while also analyzing their impact on cell type
- Technologies and skills:
 - DNA sequencing (second-generation sequencers)
 - Algorithms for DNA sequencing
 - Spatial transcriptomics and Stereo-seq technology
 - PCA, Leiden algorithm

- Algorithms for DNA sequencing
 - Wrote course on algorithms for DNA sequencing for Faculty of Mathematics' educational software
- MSc thesis: Clustering data obtained through spatial transcriptomics techniques
 - Investigated correlation between spatial coordinates and gene expressions of the cells while also analyzing their impact on cell type
- Technologies and skills:
 - DNA sequencing (second-generation sequencers)
 - Algorithms for DNA sequencing
 - Spatial transcriptomics and Stereo-seq technology
 - PCA, Leiden algorithm
 - Python

- Success of ICD therapy - Prediction of death due to heart problems

- Success of ICD therapy - Prediction of death due to heart problems
 - Tried to find parameters of the clinical picture of patients that would potentially lead to a better prediction of death due to heart problems

- Success of ICD therapy - Prediction of death due to heart problems
 - Tried to find parameters of the clinical picture of patients that would potentially lead to a better prediction of death due to heart problems
- Technologies and skills:

- Success of ICD therapy - Prediction of death due to heart problems
 - Tried to find parameters of the clinical picture of patients that would potentially lead to a better prediction of death due to heart problems
- Technologies and skills:
 - ANN, Random forest

- Success of ICD therapy - Prediction of death due to heart problems

- Technologies and skills:
 - ANN, Random forest
 - Python

Most important values at work

- Learning Opportunities: Having a mentor or someone to learn from

Most important values at work

- Learning Opportunities: Having a mentor or someone to learn from
- Positive Environment: Welcoming and positive atmosphere

Most important values at work

- Learning Opportunities: Having a mentor or someone to learn from
- Positive Environment: Welcoming and positive atmosphere
- Helping Others: Workplace values are centered around making a positive impact and assisting people

Qualifications for this position

- Educational Background: Completed a master's degree at the University of Belgrade's Faculty of Mathematics, specializing in mathematics and computer science

Qualifications for this position

- Educational Background: Completed a master's degree at the University of Belgrade's Faculty of Mathematics, specializing in mathematics and computer science
- Technical Skills: Familiar with DNA sequencing, Spatial Transcriptomics and Stereo-seq technology, with programming expertise in Python

Qualifications for this position

- Educational Background: Completed a master's degree at the University of Belgrade's Faculty of Mathematics, specializing in mathematics and computer science
- Technical Skills: Familiar with DNA sequencing, Spatial Transcriptomics and Stereo-seq technology, with programming expertise in Python
- Career Aspiration: Eager to expand knowledge in bioinformatics and actively seeking opportunities to work in a bioinformatics company
